

A world map showing the distribution of 1000 simulated species ranges. The map is color-coded by continent, with each continent assigned a unique color: North America (pink), South America (blue), Africa (green), Europe (yellow), Asia (purple), Australia (orange), and Antarctica (red). The map includes a grid of latitude and longitude lines, with longitude labeled at the bottom as -100, 0, 100, and 200. The distribution of the simulated species ranges is shown as a dense, overlapping pattern of colored lines and shapes across the map, indicating the geographic spread of the simulated species.
